流体力学 2回目

[1](1)Vo = r& · (-sind) 2 + r& · cost)

$$\sin\theta = \theta/r$$
,  $\cos\theta = \infty/r + \eta$ ,

Vo = -1227 + 122x

$$W = \frac{3}{90} \frac{3}{90} \frac{3}{92} = +80k + 80k = +280k$$

(2)  $W_z = \frac{1}{r} \frac{\partial}{\partial r} \left( r V_{\theta} - \frac{1}{r} \frac{\partial V_{rc}}{\partial \theta} \right)$ 

速度成分はVanata), Vr=0

また、ポテンシャル流が、渦なしであるので、Wを=0

\$ - 2,

$$\frac{1}{r}\frac{\partial}{\partial r}(rV\partial) = 0 \rightarrow kV\partial = C, \quad V\partial = \frac{C}{r}$$

r= aごVは連続め、流速:V= rのを用いると、r= ant

$$V_{\theta} = \frac{c}{\hat{u}} - \alpha S \rightarrow C = \alpha^2 S$$

$$\frac{1}{r} \sqrt{\partial x} = \frac{\partial^2 \Omega}{\partial x}$$

[2] (1)  $W(Z) = m\{\log(Z-L) - \log Z\} = m\log|1-\frac{L}{2}|$ 27日-11>展開を用いると

$$W(2) = \lim_{k \to 0} m \left\{ -\frac{k}{2} - \frac{1}{2} \left( -\frac{k}{2} \right)^2 + \frac{1}{3} \left( -\frac{k}{2} \right)^3 - \frac{1}{3} \right\}$$

mt = U = ),

$$W(2) = \lim_{k \to 0} \left\{ -\frac{mk}{2} - \frac{1}{2} \frac{mk}{2^2} \cdot \frac{1}{k} - \frac{mk}{3} \cdot \frac{1}{2^3} \cdot \frac{mk}{k} - \frac{1}{3} \cdot \frac{mk}{2^3} \cdot \frac{1}{k^2} - \frac{mk}{3} \cdot \frac{1}{2^3} \cdot \frac{mk}{k} - \frac{1}{3} \cdot \frac{mk}{2^3} \cdot \frac{1}{k} - \frac{mk}{3} \cdot \frac{1}{2^3} \cdot \frac{mk}{k} - \frac{1}{3} \cdot \frac{mk}{2^3} \cdot \frac{1}{k} - \frac{mk}{3} \cdot \frac{1}{2^3} \cdot \frac{mk}{k} - \frac{1}{3} \cdot \frac{mk}{2^3} \cdot \frac{1}{k} - \frac{1}{3} \cdot \frac{mk}{2^3} \cdot \frac{1}{$$

$$=$$
  $\frac{u}{2}$ 

 $(2) W(Z) = \frac{u}{Z} = \frac{u}{x+i\theta} = \frac{u}{x^2+y^2} (x-i\theta) = \phi + i \psi$ 

$$\frac{y}{\chi^2 + y^2}$$

(3)	The	=	const	fy,

$$\chi^2 + y^2 = \frac{yy}{C}$$

$$\chi^2 + \left(y - \frac{u}{2C}\right)^2 = \frac{u^2}{4C^2}$$

## [3] (1) 右図

$$T_1 = \int_0^{2\pi} u(r) dA = \int_0^{2\pi} u(r) \cdot r d\theta = \left[ 2\pi r U(r) \right]$$

X

4

$$(2) T' = \phi u \cdot ds$$

アーアは常に成り立つ。

## (3) T=2取rulr) F11, 求める速度は,

$$U(r) = \frac{77}{2\pi r} = \frac{7}{2\pi \cdot 2(\theta_{\circ} - \theta_{1})} = \frac{7}{4\pi \cdot (\theta_{\circ} - \theta_{1})}$$

壁に沿って火軸に正の何も

## 20運動は壁に治、7等速直線運動移ので、

$$\chi(t) = \frac{Tt}{4\pi(4.-4)} + \chi_0$$

$$(\chi(t), y(t)) = \begin{pmatrix} Tt \\ 4\pi(y_0 - y_1) + \chi_0, y_0 \end{pmatrix}$$
